

MPA Engineering has provided electrical design and site installations for a number of the ancillary services working for the Oil and Gas industry in Central Old.

Some of our customers include:

- Arrow Energy,
- Urban Group Energy,
- Ergon Energy,
- Origin Energy and
- QGC.

A \$2 million project the company undertook for QGC included the electrical project design of control systems, switchboards, motor installs and site cabling for dosing the waste water from the coal seam methane process.

As the concern for energy generation, distribution, usage and conservation grows, businesses need to start responding to these challenges. MPA Engineering is capable of providing professional delivery and implementation of integrated and innovative solutions for the waste products and bi-products of businesses working in the Oil and Gas sectors.
