

MPA Engineering holds an electrical contractors license and undertakes electrical installations and contract work, specialising in the industrial environment. In addition to site installation of switchboards and motor control centres, MPA Engineering can install and commission small, medium and large variable speed drive applications as well as carrying out general industrial electrical work.

General Electrical Installations Services include, but are not limited to:

- Cabling and Data Communication Cabling
- Transformer upgrades and replacements
- Underground electrical reticulation projects
- Fixed generation and standby diesel generation work
- Fuel storage and fuel transfer systems
- Specialist cabling for conveyors, batching plants and food processing systems
- Integrated control and instrumentation.

Our dedicated installation team has many years of extensive commercial and industrial experience which can be utilised on a day-to-day basis, enabling MPA Engineering to offer sound advice and practical electrical solutions.
